REVIEW

- Forms
- Validation
- File Upload

TODAY's OUTLINE

- Using a Starter Kit (Laravel Breeze)
- Retrieving The Authenticated User
- Protecting Routes
- Gates

Laravel Breeze

Laravel Breeze is a minimal, simple implementation of all of Laravel's authentication features, including login, registration, password reset, email verification, and password confirmation. Laravel Breeze's default view layer is made up of simple Blade templates styled with Tailwind CSS.

Installation:

```
composer require laravel/breeze --dev
```

```
php artisan breeze:install
```

```
npm install
```

```
npm run dev
```

```
php artisan migrate
```

Retrieving Authenticated Users

via Auth facade's user method

```
use Illuminate\Support\Facades\Auth;

// Retrieve the currently authenticated user...
$user = Auth::user();

// Retrieve the currently authenticated user's ID..
$id = Auth::id();
```

via request's user method

```
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;

class FlightController extends Controller
{
    /**
     * Update the flight information for an existing flight.
     *
     * @param  \Illuminate\Http\Request  $request
     * @return \Illuminate\Http\Response
     */
    public function update(Request $request)
    {
        // $request->user()
    }
}
```

Determining If The Current User is Authenticated

To determine if the user making the incoming HTTP request is authenticated, you may use the `check` method on the `Auth` facade. This method will return `true` if the user is authenticated:

```
use Illuminate\Support\Facades\Auth;

if (Auth::check()) {
    // The user is logged in...
}
```

Protecting Routes

Route middleware can be used to only allow authenticated users to access a given route. Laravel ships with an `auth` middleware, which references the `Illuminate\Auth\Middleware\Authenticate` class. Since this middleware is already registered in your application's HTTP kernel, all you need to do is attach the middleware to a route definition:

```
Route::get('/flights', function () {  
    // Only authenticated users may access this route...  
})->middleware('auth');
```

Redirecting Unauthenticated Users

When the `auth` middleware detects an unauthenticated user, it will redirect the user to the `login` named route. You may modify this behavior by updating the `redirectTo` function in your application's `app/Http/Middleware/Authenticate.php` file:

```
/**
 * Get the path the user should be redirected to.
 *
 * @param \Illuminate\Http\Request $request
 * @return string
 */
protected function redirectTo($request)
{
    return route('login');
}
```

Gates

Gates are simply closures that determine if a user is authorized to perform a given action.

Typically, gates are defined within the boot method of the `App\Providers\AuthServiceProvider` class using the Gate facade.

Gates always receive a user instance as their first argument and may optionally receive additional arguments such as a relevant Eloquent model.

```
use App\Models\Post;
use App\Models\User;
use Illuminate\Support\Facades\Gate;

/**
 * Register any authentication / authorization services.
 *
 * @return void
 */
public function boot()
{
    $this->registerPolicies();

    Gate::define('update-post', function (User $user, Post $post) {
        return $user->id === $post->user_id;
    });
}
```

Authorizing Actions

To authorize an action using gates, you should use the `allows` or `denies` methods provided by the `Gate` facade. Note that you are not required to pass the currently authenticated user to these methods. Laravel will automatically take care of passing the user into the gate closure. It is typical to call the gate authorization methods within your application's controllers before performing an action that requires authorization:

```
namespace App\Http\Controllers;

use App\Http\Controllers\Controller;
use App\Models\Post;
use Illuminate\Http\Request;
use Illuminate\Support\Facades\Gate;

class PostController extends Controller
{
    /**
     * Update the given post.
     *
     * @param  \Illuminate\Http\Request  $request
     * @param  \App\Models\Post  $post
     * @return \Illuminate\Http\Response
     */
    public function update(Request $request, Post $post)
    {
        if (! Gate::allows('update-post', $post)) {
            abort(403);
        }

        // Update the post...
    }
}
```

SUMMARY

After finishing this module, you should be able:

- to understand how to implement Laravel Breeze starter kit
- to understand how to retrieve authenticated user
- to understand how to protect routes
- to understand how to implement Gates

NEXT WEEK'S OUTLINE

- Laravel API Development
- Final Project (Progress) Presentation

Visi

Menjadi Program Studi Strata Satu Informatika **unggulan** yang menghasilkan lulusan **berwawasan internasional** yang **kompeten** di bidang Ilmu Komputer (*Computer Science*), **berjiwa wirausaha** dan **berbudi pekerti luhur**.

Misi

1. Menyelenggarakan pembelajaran dengan teknologi dan kurikulum terbaik serta didukung tenaga pengajar profesional.
2. Melaksanakan kegiatan penelitian di bidang Informatika untuk memajukan ilmu dan teknologi Informatika.
3. Melaksanakan kegiatan pengabdian kepada masyarakat berbasis ilmu dan teknologi Informatika dalam rangka mengamalkan ilmu dan teknologi Informatika.
