

Final Project Presentation Assignment: CIMB Niaga Case Study

Presentation Question (Goal)

"Present the findings from your detailed Final Documentation Report, focusing on your project's solution (Clickable Mockup), the rationale behind your Software Engineering approach (Scrum/Hybrid), and your team's project management and design choices for the CIMB NIAGA case study."15-Minute Presentation Guidance

The 15-minute limit is strict. The presentation must prioritize key insights and proof of work over reading every detail from the report. Use the suggested slide structure and time allocation below:

Section	Report Component Focus	Target Time	Key Deliverables for Slides
I. Introduction & Project Overview	Opening & Project Overview	2 minutes	Project Objective, Problem Solved, Key Requirements (briefly).
II. Methodology & Management	SE Method & Managerial Plan	3 minutes	Justification for Scrum/Hybrid. Key Artifacts (e.g., Sprint Backlog). Gantt Chart highlights.
III. Design & Prototype Demonstration	Design Modeling and Deliverables	7 minutes	Visuals of 1-2 key diagrams (e.g., Use Case, Sequence). Live Demonstration of the Clickable Mockup focusing on 2 core features.
IV. Quality & Risk	Quality Assurance, Risk Management	2 minutes	Testing Strategy (types used). Top 3 Risks (Technical/Managerial/Commercial) and their Mitigation.
V. Conclusion & Reflection	Closing	1 minutes	Summary of Key Outcomes. Individual Contribution and Major Challenge/Solution.
Total Presentation Time		15 minutes	

Presentation Scoring Rubric (For Lecturers)

This rubric distributes the scoring weight across four key performance areas, totaling 100 points.

Criteria	Excellent (21-25 pts)	Good (16-20 pts)	Fair (11-15 pts)	Poor (0-10 pts)	Weight
1. SE Methodology & Management Rationale	Clearly and concisely justifies Scrum/Hybrid choice; effectively uses artifacts (e.g., Burndown) to support planning; risks are relevant with robust mitigation.	Justifies method choice; presents artifacts and plans adequately; risks are identified with logical mitigation.	Method justification is weak or unclear; artifacts/plans are basic or incomplete; risks lack detail or mitigation strategy.	Fails to justify method; little to no evidence of SE practices or project planning.	25%
2. Design & Prototype Demonstration	Diagrams are highly accurate, clear, and directly support the prototype; Mockup demonstration is flawless, professional, and clearly shows key functionality.	Diagrams are accurate and helpful; Mockup demonstration covers key features logically and smoothly.	Diagrams contain errors or are difficult to follow; Mockup demonstration is buggy, rushed, or fails to showcase core features.	No clear design model provided; Mockup is non-functional or not demonstrated effectively.	25%
3. Content Depth & Clarity	All required components are addressed with insightful analysis and accurate terminology; complex concepts (QA/Testing) are simplified and explained well.	All components are addressed; content is factually correct and easy to follow; satisfactory use of SE terms.	Some components are missing or addressed superficially; concepts are vague or contain minor technical errors.	Major components are missing; content is confusing and contains significant technical errors.	25%
4. Presentation	Presentation is engaging,	Delivery is clear and well-	Delivery is hesitant or too	Delivery is poor; runs	25%

ion Delivery & Timing	professional, visually polished; adheres perfectly to the 15-minute limit; all members contribute equally and articulate complex ideas clearly.	rehearsed; stays within the time limit (or +/- 1 min); slides are professional; all members participate.	reliant on notes; significantly over/under time; slides are cluttered or unprofessional; unequal member participation.	far over/under time; lack of preparation and professionalism.	
TOTAL SCORE					100 Points
